

Dell Mini 9 Now \$249

Sunday, 08 February 2009

It seems Dell is certainly dropping the price on their Mini 9 drastically for these couple of weeks. You can in fact purchase their Mini 9s at a very low price of \$249 just take note that it will run Ubuntu instead of XP.

Dropping the price to \$249 would also mean that the Mini is \$100 bucks less than what they have sold last September 2008. On the other hand, expect marginal specification such as a mere 4GB SSD for the price that you are paying.

Yet, the Mini 9 is still a great looking ultraportable.
