

ASUS M60J

Friday, 25 September 2009

It seems that ASUS is the third company to disclose that they will be introducing their Core i7 laptops for the market, after Dell and Alienware that is. According to ASUS, they have unveiled their latest M60J, which features a 16-inch display unit with 1,366 x 768 resolution and would run on either the 1.6GHz Core i7 720QM or 1.73GHz Core i7 820QM processor.

On the other hand, this bad boy will also come with the latest 1GB NVIDIA GeForce GT240M GPU, and it can even support up to 4GB of DDR3 RAM. Other features include 1TB of HDD space and even an optional Blu-ray drive.

Would you buy this bad boy?
