

HP tx2000 Issues

Wednesday, 27 January 2010

For those who have bought the HP tx2000, I believe that you might suffer from agonizing moments from using this particular tablet. According to leading sources, they mentioned that the HP tx2000 suffers from various issues, namely dead screens, and the inability to connect to the wireless network.

According to HP, the company blamed that the overheating NVIDIA graphics card has caused these problems on their laptop. Personally, I think that HP should have managed the heat issues when designing the laptop don't blame the graphics card will ya?! You know it runs hot right?!
