
Samsung Latest Developer Kit Lets You Control Appliances from Your TV

Thursday, 26 December 2013

Every couch potato would like to never leave their couch on a beautiful evening, as surely, spending every precious moment on that comfortable sofa right in front of your TV is simply priceless. Nevertheless, if you are such a couch potato, you d be delighted to know that Samsung has just recently released a developer kit, which would allow you to control your appliances from your TV.

Basically, the programming kit would allow your TV to control your home appliances, which includes your air conditioning, network-connected lighting, and even refrigerators. The new Smart TV SDK 5.0 allows developers to easily create apps due to their web framework, and it also supports HTML5 and Native Client to run software across a wide range of TVs.
