

Airbag Jackets

Tuesday, 15 September 2015

Riding around in your motorbike can be risky business, and of course, over the course of decades, there have been advancements in safety regulations that help enforce safety amongst motorcyclists. For instance, motorcyclists are recommended to wear a helmet when riding their bike, and wearing a protective body suit can definitely enhance safety too.

And if you are thinking of enhancing your biking s safety, you should definitely take a closer look at airbag jackets. Previously airbag jackets rely on the bike to activate safety features, and at times, this can be a tricky feat. But surely, the company Dainese has remedied a solution on their latest airbag jacket dubbed as the D-air Misano 1000. The respective jacket would rely on a collection of sensors, GPS and other electronics that are housed in the back protector "monitor the dynamics of the rider's body 800 times a second" and deploy the airbag when they detect impact or tumbling. So how much it would cost you for getting this jacket? Try ~1,499 (around \$1,700).
